PEDAGOGICAL MODEL

For defining the **pedagogical classroom model** for changing **environmental behaviour within inclusive school settings**, we are going to apply the **Social Practice Theory and McGuire's proposal**

This theoretical framework defines a coherent pedagogical model, characterized by three steps:

**Problematization
Understanding,
Action.**

PROBLEMATIZE

- Initial problems should be as authentic as possible to each student;
- have different possible solutions,
- involve different "points of view" for the search of solutions,
- be at once recognizable to children,
- children's contribution to the problem should also be recognizable,
- cooperative action should be mobilized.

(Marshall 2015 and McGuire)

UNDERSTANDING

Use of **active, collaborative, and learner-centred methodologies** that enable them to understand the current environmental situation and to acquire new knowledge, skills, and meanings through social interactions (peers, teachers, society).

Facilitate **critical reflection**, helping students to understand how plastic objects shape our daily life; and the ways to reduce/replace/recycle plastics, through the knowledge of different materials and the development of new skills and meanings.

ACTION

The solutions to the problems found by the children should be **applicable**, enabling students to **become agents of change** and empowerment in their environment.

Work in group

Discuss the possibilities and difficulties they would find for applying the model in their classrooms.
